How will new technology disrupt NMCA business?

New technology is developing very fast in the society, and will no matter what, affect our business during the coming years. To try to understand how this might disturb our business in the coming years we suggest: Ad hoc group will be formed to explore this technology in our context.

Members.
- Some Cadaster Working group members
- Some IT members from NMCA
- Outside consultants?

Key questions.
- What and how might new technology disrupt our business? In particular augmented reality, Virtual reality, AI, Drone usage, linked data etc.
- What datasets might be accessible for this technology, Cadastral boundaries, addresses, building information, elevation models etc? Can it be linked to other datasets?
- How can this technology be used to disrupt our own business, e.g. in the field of Cadaster
- Are there emerging or existing technological platforms that will affect us, the cloud etc?
- What players might use this technology and be our partners or competitors.
- What would be most likely business scenario them an us.

Delivery.
- Members of the Ad hoc group should present results at Store Chefs möte.

On behalf of the Nordic Cadaster Working group
